

Roll-A-Shutter™

6/100 – INDUSTRIAL SLAT TYPE SHUTTER

The 6/100 Roll-A-Shutter curtain is made from 0.6mm thickness continuous roll formed interlocking type coated galvanised steel slats, having a nominal effective width of 100mm and a zinc coating of not less than 250g/m².

The curtain is fitted with moulded nylon clips fitted to the ends of alternate slats by three nylon rivets. When specified, special malleable iron windlocks shall be fitted to the slat ends at the recommended intervals on shutters exposed to excessive wind loading.

SLAT PROFILE BOTTOM RAIL (ALUMINIUM)

BENEFITS

- Compatible with modern architectural styling
- Specially designed for commercial and industrial openings requiring a strong closure
- Suit openings from 900mm x 900mm to 6000mm x 6000mm
- Easily operated manually (no chain wheel)
- Chain geared or electrically powered, to suit any size throughout the range.

BOTTOM RAILS

Extruded aluminium "T" section bottom rail with the top edge formed to interlock with the bottom slat of the curtain.

GEARS

Spur gears with the gearing ratio selected in accordance with shutter size.

Call 13 62 63 or visit www.bnd.com.au for further information.

The standard guides provided for nylon clipped Roll-A-Shutters are steel channels cold roll formed from 2.0mm steel, having a minimum depth of 70mm and measuring 38mm across the back. The 100mm deep guide option uses steel channels cold roll formed from 2.5mm steel, with a depth of 100mm and measuring 38mm across the back. When fixing to masonry, these guides shall be fixed securely to walls at intervals of not more than 750mm by 9.5mm diameter masnory anchors and hex head bolts, or as specified for steel work.

WINDLOCK GUIDES

When specifed, windlock channel guides cold roll formed from 2.5mm steel with a minimum depth of 85mm and measuring 50mm across the back, with a 40mm x 12mm mild steel bar welded to the inside surface of the guide will be provided. Fabricated windlock guides are also available as an option. The recommended method of securing windlock guides is by 40mm intermittent stagger welds to the steel building structure at 400mm centres.

DRUM

Steel tube drum having a minimum O.D of 168mm x 3.18mm wall thickness and designed so that the drum stress does not exceed 124MPa. The drum is fitted with bearings and mounted on a bright mild steel spindle having a minimum thickness of 35mm.

SPRINGS

Helical torsion type drum springs, made from spring steel wire conforming to AS1472. Designed to fit the drum assembly and of selected length to match the operating revolutions of the drum without exceeding the safe working stress.

BRACKETS

Fabricated from 50mm x 50mm x 6mm M/S angle and supplied with spindle support angles fitted with 12mm steel bolts, each bracket is to be fixed to the wall with no less than three 12mm masonry anchors and hex head bolts or as specified for steelwork.

LOCKING

All hand operated shutters are supplied as standard with external bottom rail slide bolt locking. All chain operated shutters are supplied as standard with chain cleat locking. There is an option for no locking, internal slide bolts, or internal & external slide bolts. There is also an option for keylocking on aluminium bottom rails up to 4800mm wide.

FINISH

Galvanised steel finish with all M/S components prime coated. Optional powdercoat finish available when specified. Hauling chains shall be zinc passivated. Colorbond® is optional.

| Electric outside mount | 460 | | 570 to back | of STR motor | | | |

Note: Should the headroom available be less than that shown for dimension "B" the 6/100 may be installed to give satisfactory operation by fixing the drum support brackets so that support arm is situated 230mm below the ceiling for doors up to 3350mm height. However the nominal daylight opening height will be reduced by the amount of difficiency in headroom.

Masonry: 12mm ragged bolts or masonry anchors

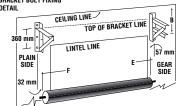

Steel: 12mm engine bolts Timber: 12mm coach bolts
